

AXIN Packing and Labeling Process Solution

Software that optimizes end-of-line processes. Deliver the right products, in the right amounts, at the right time, with the correct labels—every time—while maintaining full traceability and visibility from packing to dispatch.

What is AXIN Packing and Labeling Process Solution?

AXIN Packing & Labelling Process Solution with optional Inventory & Dispatch digitally connects the final stages of production to ensure that every product is accurately packed, labeled, and matched to the right order. Compliance is built-in with integrated Quality Inspections across process steps.

AXIN Packing & Labeling Process Solution provides valuable functions and tools to streamline end-of-line processes, minimize manual errors, and provide actionable, real-time insights for improved decision-making and traceability.

What does Packing and Labeling Process Solution do?

Enhances efficiency through a streamlined packing process

Manual packing processes can be inefficient, time-consuming, and prone to human error. AXIN Packing & Labeling Process Solution automates packing parameters and task prioritization to optimize your end-of-line processes.

- Simplifies order adjustment: Workflow visibility and control in real-time enables efficiency management last-minute changes
- Reduces errors: Integrated labeling and scanning improves packing and labeling accuracy and integrated barcode scanning that ensures correct product identification and tracking
- Improves operational control: Plan production and logistics with confidence through real time visibility of packing, labeling, inventory, and dispatch
- Accurate weight, labels, and packing: Protect profits through fewer errors, lower giveaway and fewer claims
- Strengthens compliance: Automated data capture provides audit-ready, end-to-end traceability
- Integrates seamlessly with existing systems: Import purchase order data from external systems and export back data once the delivery receipt process is completed

Quality Inspection and end-to-end traceability

Quality assessment and product traceability are vital for food safety, compliance, and protecting your brand in the event of a recall. AXIN Packing & Labeling Process Solution makes traceability a simple, automated process, helping to safeguard consumers and your business.

- Quality Inspection: Operators are guided to perform product, label and condition inspections at key process points and quantity and documentation accuracy
- Audit-ready end-to-end traceability: Inspection results and packing-related data are digitally captured and stored, making it easier to retrieve accurate records, verify product movement and prove traceability from pack to pallet to dispatch

Inventory & Dispatch

Clear and accurate data insights are essential to sell perishable products efficiently, extending shelf life and minimizing loss. Inventory & Dispatch provides real-time insights and effective inventory management; you always know what is on the floor and can make timely production adjustments that maximize efficiency.

- Real time insights for greater control: Monitor, adjust and control finished goods inventory with dashboards and analytics tools providing visibility into stock takes and packing operations
- Reliable order fulfilment: Inventory integrity and accurate picking protect profits through fewer errors, lower giveaway and better control
- Order and shipment fulfilment: Final goods management, order picking, and dispatch means on-time-in-full (OTIF), less rework and fewer claims

Scalability built-in

As a stand-alone solution, or connected to other AXIN Process and Business Solutions, AXIN Packing & Labeling Process Solution adds value to businesses of every size with connected traceability and increased control.

AXIN Packing & Labeling Process Solution is scalable to ensure as your production needs grow, your software grows with you.

Who benefits from using this software?

General Manager:

Protect margins and brand reputation by eliminating costly errors

Production Manager:

Reduce giveaway and rework with accurate packing and labeling

Quality Control Manager:

Strengthen compliance with automated, audit-ready end-to-end traceability

Dispatch Manager:

Achieve on-time, in-full dispatch by eliminating picking errors

IT Manager:

Support business growth with a modular, scalable platform

JBT Marel Software

Our experts work with you from initial consultation through installation and on-going support, ensuring you maximize your software investment and position your business for future success in food processing.
